

CURRICULUM VITAE

MOHAMMED MUHTASEB

BSc(Hons), MBBS(Hons), FRCOphth

Consultant Ophthalmic Surgeon
(Cornea, Cataract and Refractive)
Singleton Hospital, Swansea

Honorary Clinical Teacher
University of Wales, Swansea

Recognised Teacher
PgDip and MSc in Cataract and Refractive Surgery
University of Ulster

MOHAMMED MUHTASEB

Professional Registration

GMC registration

GMC Specialist Register from 6th May 2005

No: 4187275

Qualifications

CCST		1 st April 2005
FRCOphth	RCOphth Exit Examination	August 2004
MRCOphth	London	March 2000
MBBS (Hons)	Graduated with Honours <i>St. George's Hospital Medical School</i> <i>University of London</i>	July 1995
BSc (Hons)	Upper Second Class (Honours) <i>St. George's Hospital Medical School</i> <i>University of London</i>	June 1992
USMLE	US Medical Licensing Examination	Steps 1 & 2

Prizes and Distinctions

Distinctions conferred by The University of London

Awarded to the best-performing students of the University of London (total of 9 Medical Schools)

- Distinction in Medicine Final MB, 1995
- Distinction in Obstetrics and Gynaecology Final MB, 1995

Awards conferred by St. George's Hospital Medical School

Awarded to the best-performing students at the Medical School

- Brackenbury Prize in Clinical Medicine. Final MB, 1995
- Certificate of Merit in Clinical Medicine. Final MB, 1995
- Certificate of Merit in Obstetrics and Gynaecology Final MB, 1995
- Devitt-Pendlebury Exhibition 2nd MB, 1991

Award conferred by The Arthritis and Rheumatism Council

- Prize and Medal in Rheumatology 1995

Employment History

June 2006 – Present	Consultant Ophthalmologist (Cornea, Cataract, Refractive) Singleton Hospital, Swansea (<i>550 beds</i>) Honorary Clinical Teacher, University of Wales, Swansea Teacher, PgDip/MSc Refractive Surgery, Uni. of Ulster
July 2005 – March 2006	Fellow in Refractive Surgery, Consultant Cornea/Cataract Emmetropia Mediterranean Eye Institute, Crete, Greece Mr Yannis Aslanides
Feb 2005 – July 2005	Specialist Registrar in Ophthalmology Frimley Park Hospital, Mr Tom Poole (Cornea). (<i>700 beds</i>)
May 2004 – Feb 2005	Fellow in uveitis and neuro-ophthalmology King's and St Thomas' Hospitals (<i>950 beds and 840 beds</i>) Prof Miles R Stanford, Dr Elizabeth Graham, Mr Paul Riordan-Eva, Miss Emma Hollick
Aug 2003 – May 2004	Fellow in corneal surgery Moorfields Eye Clinic at St. George's Hospital, London (<i>>1,100 beds</i>). Mr Chad Rostron, Mr Jimmy Uddin
April 2002 – Aug 2003	Specialist Registrar in Ophthalmology Moorfields Eye Clinic at St. George's Hospital, London (<i>>1,100 beds</i>). Mr Alex Ionides, Mr Graham Thompson, Mr Simon Horgan, Mr G W Aylward, Mr Eric Ezra
Oct 2000 – April 2002	Specialist Registrar in Ophthalmology The Queen Alexandra Hospital, Portsmouth (<i>729 beds</i>) Mr David Boase, Mr Anthony Evans, Mr Mike Jeffrey, Mr Hunter MacLean, Mr David Farnworth
Aug 2000 - Sept 2000	Specialist Registrar (LAT) in Ophthalmology Addenbrooke's Hospital, Cambridge, (<i>1,100 beds</i>)
May 1998 - July 2000	Senior House Officer in Ophthalmology Charing Cross (<i>627 beds</i>) & The Western Eye Hospitals
Aug 1997 - May 1998	Senior House Officer in Ophthalmology Sutton Hospital Eye Unit, St. Helier NHS Trust, Surrey
Feb 1997 - Aug 1997	Senior House Officer in Accident and Emergency Jersey States Hospital, Channel Islands
Aug 1996 - Feb 1997	Prosector Oxford University, Dept. of Human Anatomy
Feb 1996 - July 1996	House Officer in Vascular and Orthopaedic Surgery St. George's Hospital Medical School
Aug 1995 - Jan 1996	House Officer in Cardiology and Gastroenterology Ipswich Hospital

Consultant Experience

Creating a New Service

Building on my sub-specialty training (described in the following section), my NHS Consultant position in Swansea and the wider Region was a new post with the remit to create and develop a modern service for the treatment of corneal and anterior segment pathology. There was no corneal surgeon present previously and I created the new service for a population of 700,000 people from conception to full maturity.

This has included numerous and varied tasks, and necessitated working with consultant colleagues, medical and nursing personnel across specialties, community optometrists, Trust senior management, the Local Health Board, and the Welsh Assembly Government amongst others. The process has included activities such as the following:

- Deciding the 'essential' and 'desirable' equipment that is required in the clinic and in the operating theatre.
- Research and negotiation with industry to secure the most cost effective packages for supply and maintenance of equipment.
- Close collaboration with senior hospital management to supply business cases for each proposed service development, and to ensure timely and efficient implementation of new capital facilities.
- Forming close relations with industry for the continuing support of our facilities and supply of essential products. These include standard lens implants, special order and premium lens implants, corneal inserts, corneal transplant material, amniotic membrane transplant material, surgical consumables, etc.
- Developing excellent administrative systems to ensure the smooth running of all clinical services.
- Designing and implementing high quality training of the surgical nurses to fully inform them of all new operations that will be performed and what their roles will be, in advance of commencing the services. This ensures maximum comfort of all the staff at a time of potential anxiety, and maximises the probability of successful outcomes for the patients.
- Very close collaboration with, and training of, local optometrists. This is essential in the running of a cornea service since many patients need specialist assessment and fitting of contact lenses, as well as routine refractions after surgical interventions.
- Ongoing review and audit of all aspects of the service. My intention is always to maintain and improve the quality and efficiency of my service, keeping it at the cutting edge of technology and ensuring excellent clinical care for my patients
- I have also developed a private practice that provides the latest technology in diagnostics and surgical interventions. As in the NHS service, my private practice was established de novo and based on high level clinical skills, the latest diagnostic technology and modern surgical treatments. I devised my own record keeping and administrative systems to ensure smooth running of the practice, together with marketing and media presence to promote growth.

- Finally, when certain services are not granted in the National Health Service, I have had the initiative to make the necessary investments in my private practice to ensure that my practice remains fully contemporary and that my patients are able to access all the latest treatments.

The result to date is a contemporary service that includes in-patient and out-patient facilities, together with a comprehensive range of modern surgical interventions. I provide sophisticated outpatient diagnostics with Pentacam corneal topography, advanced outpatient treatments including autologous serum and Avastin, as well as cutting-edge surgery with techniques such as Descemet's stripping endothelial keratoplasty (DSEK), deep anterior lamellar keratoplasty (DALK), corneal collagen crosslinking, excimer laser PTK, anterior segment trauma repair, iridodialysis repair, amniotic membrane grafting, Verisyse anterior chamber IOL, Staar ICL, and implantation of premium intraocular lenses including multifocal, accommodating, and toric lenses. For certain cases, such as DSEK and Staar ICL, I am the only surgeon in Wales to perform these operations. In other cases, such as crosslinking and Intacs SK, I was the first surgeon in Wales to use this technology. While I worked in Greece, I made the case to use Intacs for keratoconus and progressed this service on the island of Crete.

I also established a new laser refractive surgery practice in Swansea, liaising with several major companies to formulate the most clinically advanced yet cost-effective method for progressing the project. Again, a sound business case was prepared and I quickly gained approval from senior hospital management. I set up effective administrative systems, pharmacy supplies, consent processes, clinical protocols and nursing pathways amongst many other tasks. I perform LASIK and LASEK excimer laser refractive surgery, as well as lens-based refractive surgery using all categories of modern intraocular lenses.

I continually seek to develop and improve this service, keeping it contemporary and patient-focused. I have demonstrated my ability to conceive and implement ideas, work with professionals at all levels towards a common vision, achieve and maintain excellence in clinical practice, and fulfil a leadership role by including people in a strategy for a shared objective and a contented workplace.

Patient Communication

In order to assist patients understand their diagnosis and various treatment options available, I have written and published several leaflets. These leaflets cover the following areas: Cataracts and lens implant types; Cornea transplantation; Intacs; Laser refractive surgery, Multifocal intraocular lenses; Phakic intraocular lenses.

Furthermore, I have written detailed consent forms for laser refractive surgery, use of Mitomycin C in surface laser ablation, phakic intraocular lens implantation, refractive lens exchange, use of multifocal intraocular lenses, and corneal collagen crosslinking. These are detailed forms that

provide full information in an honest and understandable manner, allowing patients to make fully informed decisions about their own health.

Further information is provided on my personal website, including details of my own training and research, publications and presentations, teaching experience, and other professional interests (such as participating in developing world ophthalmic surgery). There are also surgical animations to assist patients' understanding of the procedures discussed.

Management

I adjusted well to the increased burden of patient-related administration, clinical governance, medical management and management of trainees. I continue to take on new responsibilities and am currently Lead Clinician for Audit.

Research / Audit

I am continuously undertaking relevant audits of outcomes, and continue formal research in an ongoing manner. Current projects focus on Intacs SK, DSEK, and astigmatism management at the time of cataract surgery.

I am a regular contributor to, and expert reviewer of research papers for, the ophthalmic literature.

Sub-specialty Training Experience

Cornea experience

- *In-patient*

During my Cornea fellowship in the Moorfields Eye Clinic at St George's Hospital I was responsible for managing the cornea in-patients. My unit was the Regional in-patient referral centre for 4 hospitals, so the case-mix was diverse and challenging, including aggressive microbial ulcers, impending and actual perforations, corneal melts, endophthalmitis and various traumas. As well as performing any elective and emergency surgical procedures, my duties included conducting the daily round of ward patients.

- *Out-patient*

I gained experience in a busy external disease outpatient's clinic including the pre-operative work-up of high risk keratoplasty patients, management of complex cases, new patients, and patients with a variety of anterior segment pathology. I managed the clinic when the consultant was absent, including management of new patients. I am experienced in the pre-operative work-up and consultation of refractive surgery patients, and the management of post-operative complications of refractive surgery. I am confident in the use of equipment employed in the assessment and management of anterior segment / refractive patients, including Pentacam anterior segment imaging, Orbscan corneal topography, EM 935 endothelial cell counter, and both the Allegretto and Schwind systems for corneal mapping and ocular wavefront analysis.

- *Surgery*

I gained extensive surgical experience as the primary surgeon in cases of deep anterior lamellar keratoplasty, elective penetrating keratoplasty, combined cataract extraction/IOL implant with penetrating keratoplasty, 'hot' keratoplasty for aggressive microbial keratitis, primary repair of traumatic injuries, IOL exchange, EDTA for band keratopathy, corneal biopsy, gluing for perforations, eviscerations, amniotic membrane grafts and anterior segment reconstruction. I also acquired experience in addressing refractive problems requiring limbal relaxing incisions, astigmatic keratotomy, and the use of intracorneal ring segments.

In addition, I gained experience as the primary surgeon at a centre for refractive surgery where the case mix was varied. I have performed LASIK, LASEK, PRK and flap lifts. I have used various laser platforms (Wavelight Allegretto 400 EyeQ, Schwind ESIRIS, and B&L Zyoptix) and have published research on outcomes.

I have had exposure to the use of artificial iris solutions.

Medical Ophthalmology / Uveitis experience

During my fellowship in Medical Ophthalmology I worked at The Medical Eye Unit of St Thomas' Hospital and the Neuro-ophthalmology Service of King's College Hospital, two renowned tertiary referral centres with a varied and complex case-mix. I developed a broad and sound base upon which to build a rationale for the management of inflammatory eye diseases and other ophthalmic conditions presenting in the context of a broader medical scenario. I also enhanced my skills in the use and interpretation of digital fluorescein angiography, OCT, radiological and blood-based investigations in these patients.

- *In-patient*

A significant proportion of my work required in-patient management of patients and consulting on in-patient referrals from various other hospital departments, as well as regular reviews of these patients when necessary. Management of these patients often required close liaison with medical and paramedical colleagues from a diverse range of specialties in order to achieve diagnostic and therapeutic objectives. Effective communication and team-working were essential skills to this end.

- *Out-patient*

Out-patients were received from a national referral base and were frequently managed in close co-operation with local ophthalmologists. Their pathologies were complex and varied, and provided for a continuous process of professional development. I played an active role in the management of both new and follow-up patients and acquired much experience in the safe use and monitoring of immunosuppressants in ophthalmology.

- *Neuro-radiology*

I attended two joint ophthalmology/neurology/radiology meetings each week, presenting patients in whose care I was actively involved and participating in discussions on other cases.

- *Teaching meetings*

I frequently researched cases and presented at the weekly Departmental meetings at St Thomas' Hospital

These posts, and others before them, have provided practical experience in vitreous biopsy / intravitreal antibiotic injection, anterior chamber paracentesis, and orbital floor steroid injection, amongst other procedures.

General Clinical Experience

Surgical

Alongside my sub-specialty service, I also run general clinics and surgical lists. My experience as the primary surgeon includes:

- Over 2500 phacoemulsification procedures, including high-volume cataract surgery under topical anaesthesia. Also, supervision and teaching of trainees in innumerable cases.
I use the full range of intraocular lens types, tailoring each surgery to suit the patient.
- Over 50 extracapsular cataract extractions
- Over 120 manual small incision cataract surgery (MSICS)
- Numerous elective and emergency PK, including tectonic grafts; many triple procedures (PK/ECCE/IOL), several PK with IOL exchange (incl. Verisyse IOL)
- Numerous lamellar corneal grafts including deep anterior lamellar keratoplasty (DALK) and Descemet's stripping endothelial keratoplasty (DSEK), including combined phako-DSEK
- Iris reconstruction
- Amniotic membrane grafting
- PRK / LASEK, LASIK and flap lifts - using the Wavelight, Schwind and Zyoptix platforms
- Phakic intraocular lens implants (Staar ICL)
- Primary repairs / reconstruction following penetrating globe and eyelid trauma
- Astigmatic keratotomies, limbal relaxing incisions and corneal tension sutures
- Trabeculectomies
- Pterygium excisions with conjunctival autograft
- Entropion and ectropion, lid biopsies and straightforward tumour excision/repair
- Emergency lateral canthotomy
- Temporal artery biopsies
- Eviscerations
- Paediatric procedures including horizontal rectus muscle surgery (recessions and resections) & syringe and probe

Medical

I run consultant-led general clinics that are open to all types of patient. The more commonly seen diagnoses include glaucoma, diabetes, neuro-ophthalmic, eyelid & lacrimal, uveitis, and general retinal conditions, amongst many other diverse and varied pathologies.

In addition to the experience derived from my fellowship in Uveitis/Neuro-ophthalmology, I have gained valuable experience from a wide range of general and specialist clinics, including:

Cornea and external eye disease	Oculoplastics
Refractive surgery	Neuro-ophthalmology and motility
Glaucoma	Paediatrics and ROP screening
Uveitis	Laser (PRP, grid/focal, retinopexy, YAG)
Medical Retina	

Ophthalmology Abroad

I have been immensely privileged to work with warm and dedicated staff in some very deprived areas. I have learnt a great deal from them have been delighted to hear of the satisfaction of their patients following surgery. I hope to make such activity an integral part of my career as I feel it contributes greatly to my development and to the quality of the service I can offer my domestic patients.

Ghana

The capital of the Volta Region of Ghana is the city of Ho, with a population of 1.6M people. In February 2007 their only ophthalmologist sadly passed away and eye care came to a near halt. In July 2009 I was very honoured to participate in a mission to re-ignite eye health provision as one of two lead surgeons. The whole team worked very well with dedicated and skilled local professionals to set up a new system for eye surgery, performing well over 200 cataract operations and establishing the foundations for sustainable eye health provision.

Bangladesh

I visited Bangladesh for 12 days in March 2008 to undertake high volume cataract surgery in deprived areas. The journey was undertaken in collaboration with the Impact Foundation and was said by them to be the most successful and productive eye camp they had ever run, with over 210 MSICS procedures performed by myself and another surgeon.

Palestine

In February 2005 I spent one week at Al-Mezan Hospital in Hebron, West Bank, seeing patients and advising the hospital's management on the establishment of a modern and viable ophthalmic operating theatre, especially in relation to phacoemulsification and corneal transplant surgery.

Myanmar

I spent 2 weeks in April 2004 in a remote area of Burma treating eye patients needing surgery in addition to conducting clinics. As well as completing approximately 40 ECCE's, I performed pterygium excisions, evisceration and trachomatous entropion repairs.

Management

- As a Consultant, I have developed and expanded the skills acquired during my training as outlined below. In particular, I have developed a brand new service by working with senior management, proposing viable business cases, securing funding, and implementing a detailed strategic plan that involves administrative staff, out-patient staff, surgical staff, Consultant colleagues and medical trainees.
- I undertake the full range of Consultant managerial duties necessary to manage complex patients. This often entails individualised interventions such as special order lens implants (toric, iris clip, multifocal, piggyback), various types of whole or lamellar corneal donor tissue for transplantation, amniotic membrane for grafting, topical Avastin, and autologous serum amongst others. I administer my office efficiently, organise continuing professional development around the service I provide and supervise teaching and research as part of a fully inclusive Consultant role.
- In developing my service I have liaised with the regulatory body for transplantation (the Human Tissue Authority) and sit on the Transplant Governance Committee of my Hospital to ensure continued compliance with regulations and to improve systems.
- I am currently Clinical Lead for audit, with responsibility for ensuring that all services conduct appropriate quality assurance projects towards maintaining and improving the highest levels of clinical care and modern practice
- I sit on the Business Development Group of the private hospital in Swansea, guiding it commercial decision making processes in the commercial interest of the hospital
- I have attended management courses where instruction was given on such matters as business planning, structure and function of healthcare services, regulation of healthcare services, patient safety and advocacy, risk management and other matters
- I was the administrative registrar in South West Thames for 2 years, attending the monthly Departmental meeting on behalf of the juniors, speaking on issues of relevance to the juniors and relaying information and instructions back to those concerned
- Organisation of the Regional SHO and SpR on call rotas and the point of liaison for four different Trusts in situations related to on-call staffing difficulties. Organisation of SHO and SpR timetables at the Moorfields Eye Clinic of St George's Hospital.
- Ethics Committee submissions, and the setting up and running of clinical studies. This has included devising patient information leaflets and patient consent forms, liaison with other disciplines (e.g. dietetics), and maintaining a close working relationship with statisticians
- I devised and implemented the formal examination in ophthalmology for clinical students at St George's Hospital Medical School
- Management of my own time has had to be optimal in order to fulfil responsibilities to my hospitals, the College, audit processes, research and publications, frequent post-graduate teaching day presentations, teaching juniors and supervising their research projects, and maintaining outside interests and a family life!

Teaching and Examining

Overview

I have taught in both the traditional observational style of a clinic setting, as well as in a curriculum oriented approach directed at developing key skills and knowledge.

I have experience of both the traditional lecture-based model of teaching, and the more modern approaches such as evidence-based reviews of practice, journal clubs and small group teaching.

I have taught various groups, including pre-clinical medical students, clinical medical students, ophthalmology SHO's and SpR's, doctors in other specialties (A&E), nurses and orthoptists.

In addition, I have examined medical students by way of viva and OSCE, I have written formal undergraduate exams, and have experience of assessing Special Study Modules.

Furthermore, I have supervised the surgical training of juniors with a spectrum of skills

University of Ulster

Faculty Member and Recognised Teacher, Postgraduate Diploma and Masters Degree in Cataract and Refractive Surgery. I was invited to join this distinguished Faculty in September 2008.

Singleton Hospital, University of Wales

I teach medical students, optometrists and trainee ophthalmologists in a variety of contexts. I regularly lead the local postgraduate teaching sessions, and have organized accredited postgraduate teaching for optometrists in my region (see p18).

King's, Guy's and St Thomas'

As well teaching medical students in the clinics, I have examined in formal OSCE examinations.

St George's Hospital Medical School

I devised & implemented a formal examination in ophthalmology for clinical medical students.

Queen Alexandra Hospital, Portsmouth

I designed a formal teaching programme for SHO's

Cambridge University

I delivered the weekly teaching to clinical medical students and examined in mock examinations for SHO's taking the Part 3 MRCOphth.

Imperial College

I was a surgical tutor for students preparing for the Final MB.

Oxford University

As a prosector I was responsible for both teaching and examining medical students.

A system for pre-operative stratification of cataract patients according to risk of intra-operative complications: A prospective analysis of 1441 cases

Organisation of Postgraduate Education Courses**Anterior Segment Surgery: New and Emerging Technologies**

Singleton Hospital, October 2008.

I organised a post-graduate educational evening for optometrists comprising 3 lectures of 1 hour each and awarded 3 CME points. I researched, prepared and delivered all the lectures on collagen crosslinking, multifocal and accommodating lens implants, aspheric lenses, blue-blocking lenses, advances in laser refractive surgery, prevention and treatment of age-related macular degeneration (including intraocular telescopic lenses). The feedback from delegates was extremely positive.

Media and Multimedia

ilase.co.uk

My personal website was developed to provide information about treatments offered in my practice

South Wales Evening Post and BBC News Online

15th May 2009. Articles highlighting first use in the UK of Intacs to treat a paediatric patient.

Daily Mail

12th May 2009. National newspaper article to highlight my use of a novel lens implant, the Sulcoflex Piggyback Multifocal lens. The article was a case study of a patient for whom the new lens provided good vision at all distances without use of glasses.

BBC News

On October 14th 2008, BBC Television's Wales Today broadcast a feature on the provision of DSEK in Wales, highlighting the fact that I am the only surgeon in Wales providing this technique.

<http://news.bbc.co.uk/1/hi/wales/7669382.stm>

S4C

The national Welsh language television channel broadcast the feature that was shown on BBC Wales Today

ITV Wales

Welsh national television news article broadcast on ITV in October 2007 featuring patients in whom I had implanted the Verisyse aphakic anterior chamber lens with marked beneficial effect

South Wales Evening Post and The Western Mail

Several articles in 2007 and 2008 featuring new services that I had started to deliver in Swansea with beneficial effect for the population

Channel 4 educational programme

I took part in a filmed consultation with a patient that was broadcast on Channel 4 on March 26th 2004. This was part of a series contributing to GCSE Health and Social Studies.

Session Highlights CD Rom of the AAO Annual Meeting, Anaheim 2003

A system for pre-operative stratification of cataract patients according to risk of intra-operative complications: A prospective analysis of 1441 cases

Invited Reviewer

I have reviewed articles for both specialist ophthalmic and general medical journals, and am currently a reviewer for six international medical journals:

Ophthalmology, Clinical and Experimental Ophthalmology, Indian Journal of Ophthalmology, Contact Lens & Anterior Eye, the Postgraduate Medical Journal and Medical Science Monitor.

I am also an invited contributor to Optometry Today, the national journal for optometrists.

Audit

Prevalence of corneal astigmatism in a population of patients presenting for cataract surgery: a prospective study (Singleton Hospital)

Audit of results using Intacs SK for the treatment of severe keratoconus (Singleton Hospital)

Audit of opposite clear corneal incisions (OCCI) in treating astigmatism at the time of phakoemulsification (Singleton Hospital)

Audit of the treatment of patients with a history of raised IOP or treatment for glaucoma on the day of phakoemulsification (Singleton Hospital)

Audit of efficacy of orbital floor triamcinolone injections for cystoid macular oedema secondary to uveitis – effect on near and distance visual acuity, OCT measurement of retinal thickness, and IOP (St Thomas' Hospital)

Audit of phacoemulsification procedures cancelled on the day of surgery because the patients' blood pressure was "too high" at the Eye Day Case Unit, Queen Alexandra Hospital, Portsmouth. A change in policy was implemented following a Departmental presentation

Audit of the surgical results of a new approach to Actinic Cicatricial Ectropion by the Oculoplastic Service at the Queen Alexandra Hospital, Portsmouth

Investigation of the proportion of scheduled ophthalmic day surgical procedures which were cancelled at Charing Cross Hospital during a six month period and the reasons for cancellation

The impact on waiting times for cataract surgery of implementing a priority scoring system at Charing Cross Hospital

Follow-up practice and complication rates following cataract surgery at Sutton Hospital compared with the National Cataract Survey
