

AN ADVANCED DEVICE FOR GLAUCOMA THERAPY

If you have been managing your glaucoma with medication, iStent *inject* W may be an ideal option for you. iStent *inject* W is one of the smallest devices known to be implanted in the human body and it can have remarkable benefits for patients with glaucoma.

Implanted at the time of cataract surgery, iStent *inject* W includes two tiny stents that are designed to help you effectively manage your intraocular pressure. In some cases, iStent *inject* W may even allow your doctor to reduce your glaucoma medication.

OPEN YOUR EYES TO A WORLD OF POSSIBILITIES

Ask your doctor about iStent *inject* W today!

If you have glaucoma, you may be a candidate for iStent *inject* W. Talk to your doctor today to find out if iStent *inject* W is right for you.

Prospective, non-randomized, 36-month study of second-generation trabecular micro-bypass stents with phacoemulsification in eyes with various types of glaucoma. *Ophthalmol Ther.* 2018 Dec; 7(2): 405-415.

INDICATION FOR USE. The iStent *inject*® W is intended to reduce intraocular pressure safely and effectively in patients diagnosed with primary open-angle glaucoma, pseudo-exfoliative glaucoma or pigmentary glaucoma. The iStent *inject*® W can deliver two (2) stents on a single pass, through a single incision. The implant is designed to stent open a passage through the trabecular meshwork to allow for an increase in the facility of outflow and a subsequent reduction in intraocular pressure. The device is safe and effective when implanted in combination with cataract surgery in those subjects who require intraocular pressure reduction and / or would benefit from glaucoma medication reduction. The device may also be implanted in patients who continue to have elevated intraocular pressure despite prior treatment with glaucoma medications and conventional glaucoma surgery.

AN ADVANCED DEVICE FOR GLAUCOMA THERAPY

GLAUCOMA AND EYE PRESSURE

What's causing the pressure and how it can impact your vision.

Glaucoma is a group of diseases that damage the eye's optic nerve and can, if left untreated, cause vision impairment and even blindness. Glaucoma is asymptomatic—meaning it occurs without noticeable symptoms appearing—and can often go undiagnosed without proper checkups, and worsen over time.

A major risk factor for developing glaucoma is increased eye pressure that occurs when fluid in the eye—used to transport important nutrients to the lens and cornea—accumulates and cannot drain naturally. Additional risk factors associated with glaucoma also include:

- Advanced age
- Severe myopia (nearsightedness)
- Poor blood circulation
- Genetics (having another family member with glaucoma)

HOW THE iStent *inject*® W IMPLANT WORKS

Exceptionally designed to reduce eye pressure.

Glaucoma is commonly associated with increased pressure in the eye. To help control this pressure, two tiny iStent *inject* W stents are gently inserted into your eye.

The iStent *inject* W stents are designed to create two bypasses, or openings, between the front part of your eye and its natural drainage pathway, restoring your eye's natural ability to drain fluid. Once inserted, you will not be able to see or feel the stents, but they will be working to help reduce your eye pressure.

Worldwide, iStent *inject* has helped countless patients, with more patients benefiting from the procedure every day.

A CLEAR PATHWAY, A BRIGHT FUTURE

Take advantage of this microscopic implant.

Implanting iStent *inject* W has a number of benefits, including:

- Unlike medications, which require regular doses, iStent *inject* W is a medical device that is designed to work continuously.
- iStent *inject* W may help reduce the number of glaucoma medications needed, at your doctor's discretion.

iStent *inject* W is built on a proven platform of technology shown to allow patients to maintain normal eye pressure for up to three years after the procedure, with an excellent overall safety profile.^{1,2}
